[Hvac Air Filter Box-HEATING AND COOLING: What You Need To Know Before You Begin](#)

Get an estimate before agreeing to have any work done on your HVAC unit. This will help keep you from being surprised by a bill at the end. Any reputable technician should be able to look at your unit, determine the problem and give you an estimate as to how much it will cost to fix it.

Clean your filters! If you have a window unit air conditioner, there will be a filter right under the grill you can vacuum. If you have a furnace or outdoor units, they will also have filters to be cleaned or replace. A dirty filter can make your unit inefficient or even let it overheat.

If your existing system is malfunctioning, look for leaks in the ducts. Call the utility company to test for you, it will usually be cheaper than a contractor. When the leaks are repaired, you'll find that the testing paid for itself.

If you plan on having a service on your HVAC unit, ask the technician what he will be doing. Any thorough service should consist of several things. The technician should check temperature levels, pressures, amperage draw, and coolant levels. They should adjust any belts that need it and clean the coils.

Prior to hiring any HVAC contractor, you ought to ask about their level of experience. You need <https://m.facebook.com/camfilusa?v=info> to know that they have done the sort of work you require. Although it is certainly possible for an inexperienced contractor to do the job right, it is best not to flirt with danger.

If you are thinking of installing a new roof and want it to also boost the efficiency of your HVAC, choose white materials. They reflect the sun's heat so that your attic doesn't get hot, and that means your air conditioner doesn't have to labor as hard to cool your home.

Measuring the space you want to cool is the first step to figure how large of an air conditioner you need. You can easily calculate this by using the formula: 20 BTUs per square footage of space. If you
